

Job Description

Graduate Intern

Technical Support Engineer

Location: Orpington, Kent
Duration: 6 months
Type: Paid internship
Suit: Computer Science graduate

Michelson Diagnostics Ltd is a dynamic, rapidly growing, Venture-Capital backed medical technology company in the early stages of commercialising its unique medical imaging technology for diagnosis and treatment of skin cancer. Our VivoSight scanner has been launched in USA and Germany and is gaining much interest from leading dermatologists, who see its huge potential to help them assess skin lesions as an alternative to taking skin biopsies.

We require an ambitious, motivated, enthusiastic computer science graduate with a practical aptitude, to support our experienced team of engineers in building, testing, and installing VivoSight scanners, and then providing after-sales technical support.

The successful candidate will:

- Be able to demonstrate problem solving skills
- Have experience of computer assembly and hardware configuration
- Be familiar with IT network configuration
- Be proficient in Windows and Microsoft Office
- Have a clean driving license

Experience of database management such as SQL server would also be useful.

The intern will be located at our offices in Orpington, Kent, but is expected to include travel to customers in parts of Europe and the USA, sometimes at short notice.

On completion of the internship, the company will consider recruiting an intern who has made an effective contribution to the company, at a competitive salary package.
